## PROFESSIONAL SUMMARY

Computer Science (Data Science) undergraduate with experience in enterprise software migration, software engineering, data engineering, AI/ML, and full-stack development. Migrated 46+ UHES enterprise forms and workflows using React, Spring Boot, PostgreSQL, REST APIs, and authentication mechanisms.

## EDUCATION

### **GITAM University**

*B.Tech in Computer Science (Data Science) — CGPA: 7.86/10*

Visakhapatnam, Andhra Pradesh

2023 – 2027

## EXPERIENCE

### **Fluentgrid Ltd.**

*Software Development & Data Engineering Intern*

Visakhapatnam, India

2026 – Present

- Independently migrated 46+ enterprise forms and workflows within Fluentgrid's UHES (Unified Head End System), a large-scale utility smart metering platform supporting multi-million-device deployments, including API integrations, dynamic grids, request-response mappings, and configuration management for client deployment.
- Developed and customized dynamic form-builder components involving nested forms, grids, workflow configurations, and business process automation.
- Integrated REST APIs and Spring Boot backend services to enable secure communication, structured data transfer, and enterprise workflow execution.
- Utilized PostgreSQL and token-based authentication mechanisms to support data migration, configuration management, and secure platform interactions.
- Diagnosed and resolved migration-related issues while validating workflow behavior, functionality, and deployment readiness across enterprise modules.

## PROJECTS

### **AI-Powered Answer Script Evaluation System**

2026

- Developed an NLP-driven evaluation platform for automated student answer assessment using syntax and semantic analysis.
- Designed a multi-stage pipeline for preprocessing, semantic matching, scoring, and performance reporting.

### **Event Management & Rating System**

2025 – Present

- Designed and developed a web-based event management platform supporting registrations, ratings, feedback, and participant management.
- Implemented scalable workflows and structured data management for efficient event operations.

### **Image Classification Using CNN**

2025

- Developed a CNN-based image classification system using TensorFlow and computer vision techniques.
- Achieved approximately 85–90% classification accuracy through preprocessing and hyperparameter tuning.

## CERTIFICATIONS

Big Data 301 (Infosys Springboard) | Python for Everybody (Coursera) | Introduction to AI and Applications (Coursera)

Ethical Hacking Basics (Coursera) | Techxcelerate Hackathon Participant

## TECHNICAL SKILLS

**Languages:** Python, SQL, C, JavaScript, HTML/CSS

**Frameworks:** React, Spring Boot, TensorFlow, PyTorch

**AI/ML:** NLP, Prompt Engineering, Machine Learning, Deep Learning, CNN, Computer Vision

**Data:** PostgreSQL, Data Migration, ETL, Data Processing

**Tools:** Git, MongoDB, GCP, VS Code, PyCharm

**Core:** DSA, OOP, DBMS, SDLC
